

TEST

Application::~~Application

WindowContext::Close

```
graph LR; TEST[TEST] --> WindowContext[WindowContext::Close]; Application[Application::~~Application] --> WindowContext;
```

The diagram illustrates a flow or relationship between three components. On the left, there are two rectangular boxes. The top box is labeled 'TEST' and the bottom box is labeled 'Application::~~Application'. Both boxes have black outlines and white backgrounds. Two blue arrows originate from the right side of these boxes. The arrow from 'TEST' points diagonally down and to the right. The arrow from 'Application::~~Application' points diagonally up and to the right. Both arrows converge towards a single rectangular box on the right. This box is labeled 'WindowContext::Close' and has a black outline with a light gray fill. The arrows point to the left side of this box, specifically towards its top and bottom edges.
