

LineRenderer::SetLineWidth

LineRenderer::SetVertices

LineRenderer::RebuildQuads

```
graph LR; A[LineRenderer::SetLineWidth] --> C[LineRenderer::RebuildQuads]; B[LineRenderer::SetVertices] --> C;
```

The diagram illustrates a dependency or call relationship. Two methods, 'LineRenderer::SetLineWidth' and 'LineRenderer::SetVertices', are shown on the left. Arrows from both of these methods point to a third method, 'LineRenderer::RebuildQuads', which is highlighted with a gray background. This suggests that 'RebuildQuads' is a common operation that is triggered after either setting the line width or the vertices.
